I am an early software adopter, constantly looking for professional growth, and am really passionate about my job. I worked on applications that had several millions of downloads worldwide, for international customers and with international teams. I like teamwork and the inherent exchange of ideas. I consider myself a very quick learner. I will be more than glad to travel or relocate.

Experiences

pr0gramm.com

pr0gramm.com is an Android application for the homonymous German website; it is a social gallery of images (JPEG and GIF), and videos (webM) collected on the web. The application is developed using the MVP pattern, and besides different background services (for push notifications and updates) it uses Google Services for advertising, tracking and in app purchase.

July 2014 – on going / Web & Android developer
Tierra

Frontend developer in a team for an enterprise application, regarding management of tracking devices, tasks scheduling and projects administration.

December 2013 – July 2014 / Android consultant
Deltatre

Developer for the Dawri+ project, an international football results application with live video, photo, news and video gallery. The application was developed using the MVVM pattern.

Developer and maintainer of the Sochi winter Olympics applications for Android, and of the international association of athletics federation (IAAF) application.

Developer of a configurable application for sport federations, whose functionalities allow a company to show their own news feeds, along with sport results and schedules, athlete bios, and real time notifications of schedule and result changes. Developed using the MVVM pattern and Functional Reactive Programming.

July 2012 - December 2013 / Mobile developer
Froggy

Developer of Samsung Smart TV apps targeting the 2010~2013 platforms, along with an integration layer between TV's and Samsung smartphones.

Developer of Blackberry apps using the WebWorks SDK, available on the BlackBerry World.

I attended BlackBerry Jam in Amsterdam to dig into the WebWorks SDK and collaborate with others developers.

Education

2011-2012 / Computer science high school
I.I.S. Peano

Programming, algorithm, OOP and databases.

Skills

Android / Java
I have knowledge of the Android SDK, with particular interest for services, alarm management, UI customization, VideoViews, efficient resource handling (GIFs) and notifications.

Gradle / Maven
I know how to create and configure complex Gradle builds connected with external and internal Maven (Nexus) repositories.

HTML5, CSS3, Javascript
I know how to develop HTML5 ready mobile apps using JQuery & Angular.

NodeJS
I developed my personal website (http://mattiafranchetto.com) using BDD techniques with Mocha and should.js.

Design patterns
I know all the basic design patterns, and I am using them in all my applications (strategy, decorator, observer, chain of responsibility, factories and so on).

Git
I use git along with the gitflow process for all my developments.

Languages
Italian (mother tongue)
English (fluent)
